EDUCATION

Indus University, Ahmedabad, Gujarat

Oct. 2023 – May 2026

Bachelor of Science in Computer Applications & Information Technology

TECHNICAL SKILLS

Languages: JavaScript, HTML5, CSS3, PHP, Java, C#

Frameworks & Libraries: React.js, Node.js, Express.js, Bootstrap, Vite, .NET

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, VS Code, npm, RESTful APIs

Core Competencies: Leadership, Web Development, Project Management, Problem-Solving, Team Communication

PROJECTS

Hospital Management System

2025

Team Project

- Built a comprehensive full-stack hospital management web application using PHP and MySQL, featuring patient records, appointment scheduling, staff management, role-based authentication, and real-time dashboards.
- Designed and optimized MySQL database schemas and backend modules for efficient medical data storage, retrieval, reporting, and seamless system performance.

AI Thumbnail Generator

2025

Full-Stack Developer / Team Project

- Developed an AI-powered thumbnail generation tool using React and Vite on the frontend with Node.js and Express.js on the backend, delivering automated design generation.
- Focused on fast rendering, clean UI/UX design, and seamless user experience using modern frontend tooling and RESTful API architecture.

HR Management System (HRMS)

2026

Full-Stack Developer / Personal Project

- Developed a scalable HR management platform using TypeScript, Node.js, Express.js, Supabase, and Tailwind CSS, enabling employee management, attendance tracking, leave requests, payroll, and role-based authentication.
- Designed a modern and responsive dashboard with secure RESTful APIs, optimized database operations, and streamlined HR workflows to improve efficiency and user experience.

Smart Farming India

2026

Full-Stack Developer / Personal Project

- Built a smart agriculture platform using TypeScript, Node.js, Express.js, MongoDB, and Tailwind CSS, providing AI-powered crop disease detection, weather forecasting, GPS farm area calculation, and government scheme information.
- Implemented secure authentication, responsive dashboards, RESTful APIs, and intelligent farming tools to help farmers make data-driven decisions and improve productivity.

TransitOPS

2026

Full-Stack Developer / Team Project(Hackathon)

- Developed a transport operations management system using React.js, Node.js, Express.js, MongoDB, and Tailwind CSS, featuring vehicle management, driver records, dispatch scheduling, maintenance tracking, and expense monitoring.
- Built responsive dashboards with role-based access control, optimized backend APIs, and real-time operational insights to improve fleet management efficiency and business workflow.

Setu-Architect

2026

Full-Stack Developer / Personal Project

- Designed and developed a full-stack business website for Setu Architects, a structural engineering and design firm, using Next.js, Node.js, Express.js, MongoDB, and Tailwind CSS, featuring project/client showcases, a contact module, and a responsive, SEO-friendly UI.

FileDrop

Full-Stack Developer / Personal Project

2026

- Built a guest-first temporary file-sharing platform using Next.js, React, and TypeScript, featuring a resilient, cross-refresh resumable multipart upload engine capable of handling 10GB+ files.
- Engineered a direct-to-cloud upload architecture using Backblaze B2 presigned URLs to bypass the Node.js backend entirely, eliminating server memory bottlenecks and enabling adaptive, concurrency-based upload optimization.
- Implemented atomic MongoDB operations for unique download limits and active-download-lease protection, alongside idempotent cron jobs for automated storage cleanup and cost control.

Provia

Full-Stack Developer / Personal Project

2026

- Developed an AI-powered portfolio and resume generation platform using Next.js 16, TypeScript, Prisma, and PostgreSQL, featuring a multi-theme Portfolio Studio, GitHub sync, and live publishing with real-time analytics.
- Built a PDF resume intelligence pipeline that extracts unstructured text via AI and maps it into structured JSON to automatically hydrate user profiles, alongside a context-aware 3D AI assistant powered by the Google Gemini API.
- Designed a modular template engine enabling hot-swappable UI themes (Immersive 3D, Editorial, Dark Mode) and implemented custom JWT authentication with robust Prisma connection pooling for high-concurrency serverless environments.

EXPERIENCE

MERN Stack Developer Intern — KICT Education and Technology

2025 – 2026

Ahmedabad, Gujarat

- Developed responsive and full-stack web applications using React.js, Node.js, Express.js, and MongoDB, improving application performance and user experience.
- Collaborated with cross-functional teams to implement frontend and backend features aligned with business requirements and project specifications.
- Optimized component architecture, database schemas, and RESTful API design to enhance application scalability and maintainability.
- Managed project workflows from initial planning through deployment; applied problem-solving skills to resolve technical challenges effectively.

ACHIEVEMENTS

MERN Stack Internship: Completed a hands-on internship at KICT Education and Technology, delivering real-world web applications using the MERN stack.

Project Leadership: Led full-stack development projects end-to-end, from architecture design to deployment, demonstrating ownership and technical depth.

Continuous Learning: Actively learning advanced technologies including .NET, C#, and cloud computing; exploring DevOps practices and CI/CD pipelines.

Community Engagement: Passionate about contributing to open-source projects, collaborative coding, and the tech community in Ahmedabad.
